C105 STRUCTURAL SUPPORT

C106 ALTERNATIVE STRUCTURAL SUPPORT

The PFi Closed Circuit Cooling Tower with the OptiCoil™ System increases capacity by up to 30% or more*, enabling the PFi model line to achieve either the lowest total installed cost or the lowest total cost of ownership*. XE (Extreme Efficiency) models are also available with energy efficiency levels of up to five times the minimum requirements established in ASHRAE 90.1-2013, to further lower energy costs and reduce sound levels. The PFi model line with its patent-pending OptiCoil System, provides flexibility to meet the needs of owners, contractors, and engineers by bringing the most value to new or replacement applications where dry operation is a priority.

* Compared to traditional induced draft counterflow style closed circuit cooling towers

BAC's PFi Closed Circuit Cooling Tower: The Efficient Solution for Dry Operation

Designed for Small to Large Tonnage Requirements
18 to 360 Nominal Tons in a Single Cell
Up to 5,709 USGPM for Process Applications

PFi Benefits

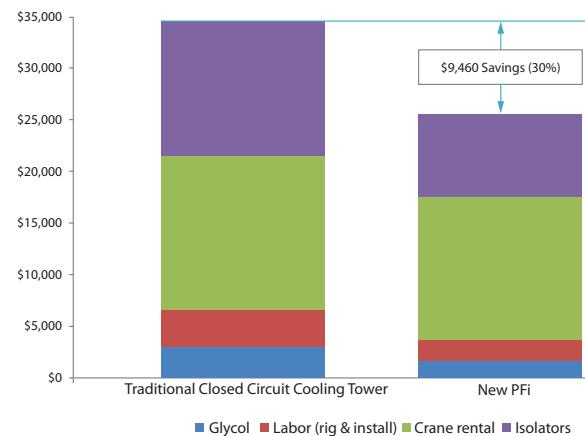

➤ Lowest Total Installed Cost

For contractors and owners looking for the lowest total installed cost, the PFi Closed Circuit Cooling Tower can lower installation costs by 30% or more via:

- ▶ Reduced crane, structural, and vibration isolation costs due to smaller footprint and lighter weight
- ▶ Reduced rigging and installation time with self-guiding pins and one-piece lift capability
- ▶ Less glycol required to achieve the same or higher heat transfer
- ▶ Smaller size of VFD due to a smaller HP motor
- ▶ Elimination of field thermal performance testing costs due to CTI certification for both water and glycol

Additionally, the PFi model line has many installation-friendly features, such as pre-assembled external service platforms that help significantly reduce installation times.

Typical Installation Costs

Typical 200-Ton Closed Circuit Cooling Tower Comparison

Lifetime Energy Costs

XE Model Energy Comparison

➤ Lower Risks and Costs with Like-For-Like Replacement

For replacement applications that require a like-for-like solution, the PFi model line can not only provide the lowest total installed cost or the lowest total cost of ownership, it can also lower the project risks and overall project time line. The PFi Closed Circuit Cooling Tower will deliver the same or even higher capacity, while minimizing switching costs through the reuse of existing:

- ▶ Steel support and vibration isolators
- ▶ Enclosure architecture
- ▶ Electrical infrastructure, starters and VFD

Lastly, the PFi model line is compliant with the latest building codes for energy efficiency, IBC codes for wind and seismic applications. The unit will perform per published ratings, as the entire model line is independently CTI certified.

New PFi Units Used for Replacement of Older Style Competitor Units

PFi XE Models

XE Models are up to 5 times more efficient than the minimum ASHRAE 90.1-2013 requirements

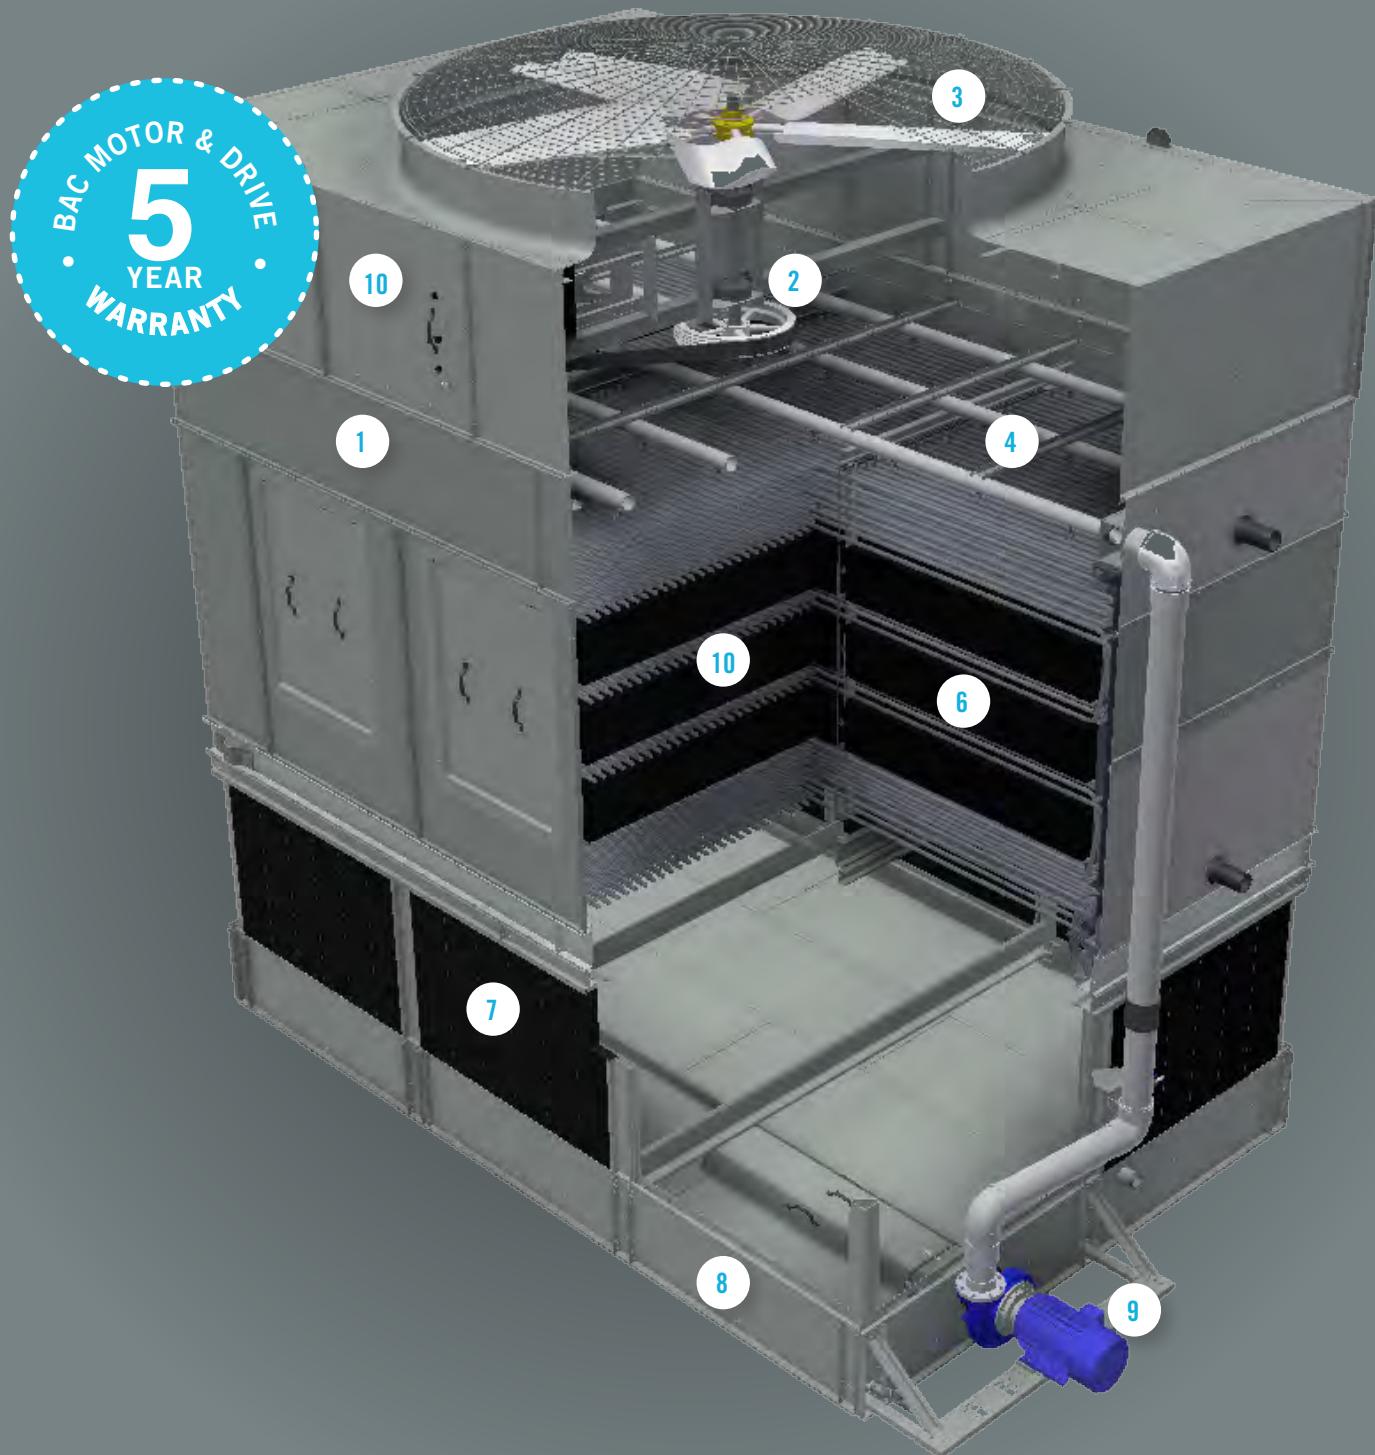

These energy efficiency levels help contribute to LEED® credits

Reduces sound levels by 5 dB while maintaining the same heat transfer

PFI Construction Details

1

Heavy-Duty Construction

- ▶ G-235 (Z700 metric) hot dip galvanized steel panels
- ▶ Meets wind and seismic requirements of the International Building Code (IBC)
- ▶ Certified with seismic ratings up to 3.75g at grade
- ▶ Designed to withstand wind loads (per ASCE/SEI 7-10) up to 200 psf

2

BALTIDRIVE® Power Train

- ▶ Premium efficient/VFD duty motors
- ▶ 5-year motor and drive warranty
- ▶ Corrosion resistant cast aluminum sheaves
- ▶ Heavy-duty bearings, with minimum L_{10} life of 100,000 hours
- ▶ Premium quality, solid backed, multi-groove belt

3

Low HP Axial Fan(s)

- ▶ High efficiency
- ▶ Quiet operation
- ▶ Corrosion resistant aluminum

4

OptiSpray™ Technology Water Distribution System

- ▶ Patent pending technology
- ▶ Uses up to 60% less HP than competitor's unit
- ▶ Exclusive BranchLok Removal System for tool free branch removal
- ▶ Overlapping spray patterns ensure proper water coverage
- ▶ Large orifice, non-clog, BAC 360 Spray Nozzles
- ▶ Nozzles grommeted for easy removal

5

Rigging Guides (NOT SHOWN)

- ▶ Self-guiding channels guide the coil casing section into position decreasing rigging time
- ▶ Self-alignment pins
- ▶ Robust base frame ensures squareness
- ▶ No skid required for shipment

6

OPTICOIL™ System Heat Transfer System

COIL

- ▶ Continuous serpentine, steel tubing
- ▶ Hot-dip galvanized after fabrication (HDGAF)
- ▶ Pneumatically tested at 375 psig (2,586 kPa)
- ▶ Fabricated per ASME B31.5 standards
- ▶ When required, orders shipping into Canada are supplied with a CRN

BAC PAK™ FILL

- ▶ High efficiency heat transfer surface
- ▶ Polyvinyl chloride (PVC)
- ▶ Impervious to rot, decay, and biological attack

7

Combined Inlet Shields

- ▶ Corrosion resistant
- ▶ Maintenance free
- ▶ UV-resistant finish
- ▶ Easy to remove sections

8

Cold Water Basin

- ▶ Sloped for easy cleaning
- ▶ Suction strainer with removable anti-vortex hood accessible from the louver face
- ▶ Adjustable water make-up assembly

9

Recirculating Spray Water Pump

- ▶ Close coupled, bronze fitted centrifugal pump
- ▶ Totally enclosed fan cooled (TEFC) motor
- ▶ Bleed line with metering valve installed from pump discharge to overflow

10

Tool-less Access Doors

- ▶ Inward sliding door
- ▶ Permanently attached to the unit

PFi Custom Features & Options

Materials of Construction

Determining the appropriate material of construction for a project depends on several factors, including water quality, climate and environmental conditions, availability of time and manpower for maintenance, unit lifetime requirements, and budget. BAC provides the widest variety of material of construction options in the industry and has the ability to provide a solution to meet all conditions and budgets. Options such as the TriArmor® Corrosion Protection System and EVERTOUGH™ Construction provide superior corrosion resistance and durability at a tremendous value.

STANDARD CONSTRUCTION

G-235 mill galvanized steel is the heaviest commercially available galvanized steel, universally recognized for its strength and corrosion resistance. To assure long life, G-235 mill galvanized steel panels and structural members are used as the standard material of construction. BAC units are certified to withstand up to an S_{DS} of 3.10g and wind loads of up to 200 psf, proving its construction is designed for extreme durability. With proper maintenance and water treatment, G-235 galvanized steel will provide an excellent service life under the operating conditions normally encountered in comfort cooling and industrial applications.

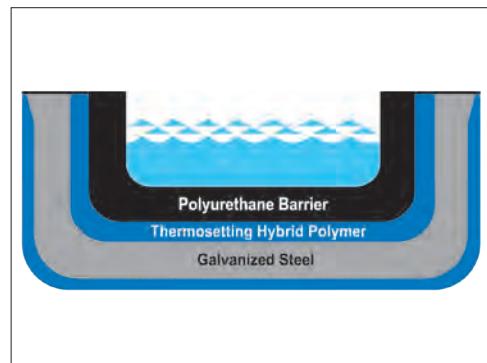

TRIARMOR® CORROSION PROTECTION SYSTEM (OPTION)

The TriArmor® Corrosion Protection System consists of heavy gauge G-235 galvanized steel panels fully encapsulated by a thermosetting hybrid polymer and further protected by a polyurethane barrier applied to all submerged surfaces of the cold water basin. The triple layers of protection form a completely seamless cold water basin for the most leak resistant and durable basin in the industry. Other components within the basin, such as the strainer and submerged structural supports, will be constructed of stainless steel. The TriArmor® Corrosion Protection System was specifically designed for evaporative cooling applications and released in 2006 after a decade of extensive R&D and field testing. To date, there are thousands successful installations in North America. Every cold water basin is leak tested at the factory and warranted against leaks and corrosion for five years.

Rigging of a Standard Installation

TriArmor® Corrosion Protection System Triple Layer Protection of the Cold Water Basin

Application of TriArmor® Corrosion Protection System

EVERTOUGH™ CONSTRUCTION (OPTION)

EVERTOUGH™ Construction combines the most corrosion resistant materials to provide the best value in corrosion protection for most water chemistries. EVERTOUGH™ Construction is backed by a comprehensive 5-year warranty which covers ALL components from the fan to the cold water basin, from louver to louver, including the motor (excluding the coil).

- The following materials are used in EVERTOUGH™ Construction:
 - The cold water basin is constructed with the TriArmor® Corrosion Protection System. The basin is leak tested at the factory and warranted against leaks and corrosion for 5 years.
 - Designated steel components above the cold water basin are constructed of heavy-gauge G-235 mill galvanized steel and further protected with a thermosetting hybrid polymer.
 - The distribution system is non-corrosive Schedule 40 PVC.
 - Other components within the cold water basin, such as the strainer, will be constructed of stainless steel.

EVERTOUGH™ Construction Installation

► THERMOSETTING HYBRID POLYMER (OPTION)

A thermosetting hybrid polymer, used to extend equipment life, is applied to select G-235 mill galvanized steel components of the unit. The polymerized coating is baked onto the G-235 mill galvanized steel and creates a barrier to the already corrosion resistant galvanized steel. The thermosetting hybrid polymer has been tested to withstand 6,000 hours in a 5% salt spray without blistering, chipping, or losing adhesion.

► STAINLESS STEEL (OPTION)

Several stainless steel material of construction options are available.

• WELDED STAINLESS STEEL COLD WATER BASIN

All steel panels and structural members of the cold water basin are constructed from stainless steel. Seams between panels inside the basin are welded, providing an advantage over bolted stainless steel basins for minimizing susceptibility to leaks at basin seams. The basin is leak tested at the factory and welded seams are provided with a 5-year, leak-proof warranty.

• ALL STAINLESS STEEL CONSTRUCTION

Steel panels and structural elements are constructed of stainless steel. Seams between panels inside the cold water basin are welded. The basin is leak tested at the factory and welded seams are provided with a 5-year, leak-proof warranty.

Welded Stainless Steel Cold Water Basin

PFi Custom Features & Options

► SEISMIC/WIND UPGRADED STRUCTURE

Select steel panels and structural members are upgraded for higher seismic and wind load applications. An upgraded PFi unit is certified to withstand up to an S_{ds} of 3.75g and wind loads of up to 200 psf.

► OptiCoil™ System

The patent pending OptiCoil System combines indirect and direct heat transfer sections arranged to maximize thermal performance. The OptiCoil System consists of standard serpentine coil with BAC Pak™ Fill inserted within the coil structure, engineered for easy access.

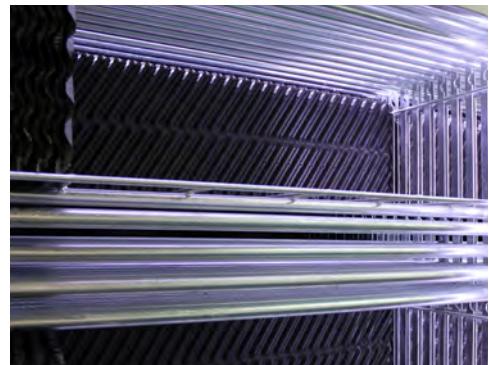

► Coil Configurations

BAC offers a large selection of coil configuration options.

► STANDARD SERPENTINE COIL

The standard coil is constructed of continuous lengths of all prime surface steel. The coil is hot-dip galvanized after fabrication (HDGAF) to apply a thick, zinc corrosion barrier over the entire exterior surface of the coil. The coil is designed for low pressure drop and for free drainage of fluid. Each coil is pneumatically tested at 375 psig (2,586 kPa) and is fabricated per ASME B31.5 standards to ensure the highest quality and complete integrity.

OptiCoil™ System

► CLEANABLE HEADER COIL (OPTION)

The cleanable header tube bundle provides removable cover plates on the inlet and outlet header boxes to permit access to each serpentine tube circuit for solvent or air-pressure cleaning. Tubes are all prime surface steel tubing formed into a serpentine shape and welded into an assembly. Coil material options include carbon steel coils (hot-dip galvanized outside surface). Each coil is pneumatically tested at 125 psig (860 kPa).

► STAINLESS STEEL COIL (OPTION)

Coils are available in stainless steel for specialized applications. The coil is designed for low pressure drop and for free drainage of fluid. Each coil is pneumatically tested at 375 psig (2,586 kPa) and is fabricated per ASME B31.5 standards to ensure the highest quality and integrity.

Stainless Steel Coil Construction

► STRAIGHT-THROUGH CLEANABLE COIL (OPTION)

A header box with a removable cover plate at each end of the coil allows access to every tube end for mechanical cleaning or plugging. The header box is available in carbon steel (hot-dip galvanized inside and out). Each coil is pneumatically tested at 125 psig (860 kPa).

► ASME U DESIGNATOR COIL (OPTION)

BAC offers coils that are certified in accordance with the ASME Boiler and Pressure Vessel Code, Section VIII, Division I. ASME U designated coils are available for projects requiring ASME certified pressure vessels and involve 3rd party inspection and certification. Standard ASME U designated coils are rated at 340 psig (2,344 kPa) maximum allowable working pressure, and they are pneumatically tested at 375 psig (2,586 kPa).

► MULTIPLE CIRCUIT COILS (OPTION)

Split coil configurations are available to allow separate process fluid loops through the same unit. Separate loops may be needed for multiple applications requiring different temperature processes or multiple types of process fluids.

► Fill

The BAC Pak™ Fill is exclusively designed to provide you guaranteed thermal performance and is made of PVC making it virtually impervious to rot, decay, and biological attack. The fill can be used in applications with entering water temperature up to 140°F (60°C). The fill and drift eliminators are formed from self-extinguishing PVC that meets CTI Standard 136 for flammability, strength, and impact testing.

NOTE: A Canadian Registration Number (CRN) is required for all pressure vessels over 15 psig entering Canada. The CRN identifies that the design of a boiler, pressure vessel, or fitting has been accepted and registered for use in Canada.

PFi Custom Features & Options

› Drive System Options

The fan drive system provides the cooling air necessary to reject unwanted heat from the system to the atmosphere. All BAC drive systems use premium efficient cooling tower duty motors and include BAC's comprehensive 5-year motor and drive warranty. Cooling tower duty motors are specially designed for the harsh environment inside a closed circuit cooling tower and have permanently lubricated bearings, drastically decreasing the maintenance requirement of the motor. BAC belt drive systems are the most durable and maintenance friendly drive systems on the market, including single nut adjustment for belt tensioning to make belt tensioning simple.

► STANDARD INDEPENDENT DIRECT DRIVE MOTORS

Standard on PFi-0406 and PFi-0412

The direct drive dual motor system with TEAO motors is factory mounted, alleviating the need for field installation and includes independent fans and motors for capacity control and redundancy in critical applications. Direct drive systems have the benefit of simplicity by having fewer moving parts, which reduces maintenance requirements and friction losses within the drive system.

STANDARD BALTIDRIVE® POWER TRAIN

Standard on all models except PFI-0406 and PFI-0412

The BALTIDRIVE® Power Train utilizes special corrosion resistant materials of construction and state-of-the-art technology to ensure ease of maintenance and reliable year-round performance. This BAC engineered drive system consists of a specially designed powerband and two cast aluminum sheaves located at minimal shaft centerline distances to maximize belt life. When compared to a gear drive system, this specially engineered belt drive system provides many advantages. The BALTIDRIVE® Power Train requires only periodic inspection of components and belt tensioning, which is simple with a single nut adjustment and requires less downtime. Only fan bearing lubrication is required for routine maintenance. Belt drive systems also have the added advantage of being suitable for variable frequency drive (VFD) applications without requiring expensive optional accessories.

BALTIDRIVE® Power Train Fan System
Used for VFD Applications

► STANDARD EXTENDED LUBRICATION LINES

Extended lubrication lines are available for lubrication of the fan shaft bearings. Fittings are located on the exterior casing panel next to the access door.

► INDEPENDENT FAN OPERATION (OPTION)

Two fan PFi-1218 and PFi-1236 models are available for added redundancy and capacity control. The two fan drive system consists of one fan motor and drive assembly for each fan to allow independent operation, adding an additional step of fan cycling for capacity control. Each fan and motor combination is supplied with the BALТИDRIVE® Power Train fan drive system and includes all the same benefits of the one fan BALTIIDRIVE® Power Train (see the previous description) with the added capability of redundancy.

► VIBRATION CUTOUT SWITCH (OPTION)

A factory mounted vibration cutout switch is available to effectively protect against rotating equipment failure. BAC can provide either a mechanical or solid-state electronic vibration cutout switch in a NEMA 4 enclosure to ensure reliable protection. Additional contacts can be provided on either switch type to activate an alarm. Remote reset capability is also available on either switch type.

► AUTOMATIC BEARING GREASER (OPTION)

Automatic bearing greasers come with BAC recommended grease, compatible with all BAC bearings and provide a continuous supply of new grease to eliminate the need for periodic bearing maintenance. Life of the bearing is extended by eliminating under and over greasing problems. Positive displacement pumps allow for mounting up to 30 feet away from the bearing. When the grease pouch is nearly depleted, after three months to a year depending on bearing size, simply replace the pouch.

Vibration Cutout Switch

Automatic Bearing Greaser

PFI Custom Features & Options

➤ Cold Water Basin

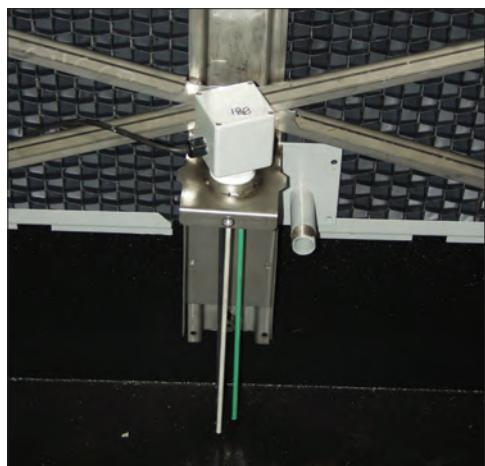

The spray water collects in the cold water basin and is then pumped back over the coil. During operation, the PFI basin helps eliminate any stagnant water zones, which are susceptible to biological growth.

► STANDARD MECHANICAL WATER LEVEL CONTROL

Mechanical make-up valves must operate continuously in the moist and turbulent environment within evaporative cooling equipment. Due to this environment, the operation of the valve must be simple and the valve must be durable. BAC's high quality mechanical water level control assembly is standard with all units and has been specially designed to provide the most reliable operation while being easy to maintain. This accessory is omitted for remote sump applications.

Mechanical Water Level Control

Electric Water Level Control

ELECTRIC WATER LEVEL CONTROL (OPTION)

BAC's electric water level control (EWLC) is a state-of-the-art, conductivity actuated, probe type liquid level control. The hermetically sealed EWLC is engineered and manufactured specifically for use in evaporative cooling systems and is equipped with an error code LED to indicate status, including when the water and/or probes are dirty. The EWLC option replaces the standard mechanical make-up valve and includes a slow closing, solenoid activated valve in the make-up water line to minimize water hammer. EWLC is recommended when more precise water level control is required and in areas that experience sub-freezing conditions.

► BASIN SWEEPER PIPING (OPTION)

Basin sweeper piping is an effective method of eliminating sediment that may collect in the basin. A complete piping system, including nozzles, is provided in the basin to connect to side stream filtration equipment (provided by others). For more information on filtration systems, consult the "Filtration Guide" found on page J241.

► LOW AND HIGH LEVEL ALARM FLOAT SWITCHES (OPTION)

Low and high level alarm float switches are available to provide added control to your equipment operation. Level alarms can alert operators to an abnormal operating condition to ensure the highest system efficiency with minimal water usage.

Basin Sweeper Piping

► BASIN HEATERS (OPTION)

Evaporative cooling equipment exposed to below freezing ambient temperatures require protection to prevent freezing of the water in the cold water basin when the unit is idle. Factory-installed electric immersion heaters, which maintain 40°F (4.4°C) water temperature, are a simple and inexpensive way of providing such protection.

HEATER kW DATA

Model Number	0°F (-17.8°C) Ambient Heaters		-20°F (-28.9°C) Ambient Heaters	
	Number of Heaters	kW per Heater	Number of Heaters	kW per Heater

PFI-2418	2	18	2	24

Basin Heater

 **NOTE:** This table is based on 460V/3 phase/60 Hz power.

► OptiSpray™ Technology Water Distribution System

BAC provides the lowest spray water pump HP in the industry for closed circuit cooling tower products, keeping operating costs as low as possible. BAC has optimized the spray water coverage over the coil in order to maximize capacity.

► STANDARD SPRAY WATER PUMP

The PFI water distribution system comes standard with an integral spray water pump sized to distribute the recirculating water over the coil, maximizing capacity. The patented BAC 360 Spray Nozzles are non-clog to ensure even flow over the coil area, and are grommeted for easy removal. BAC's exclusive OptiSpray™ Technology can save you over \$2,000 in annual operating costs.

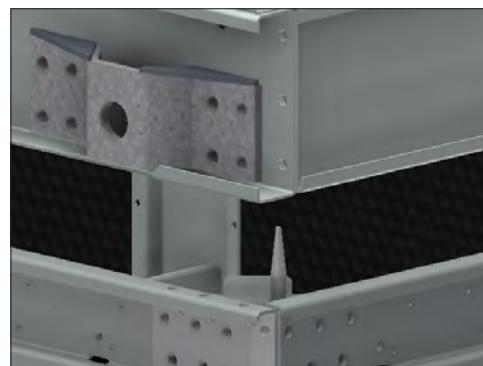

PFi Custom Features & Options

➤ Shipping and Rigging

BAC units are factory-assembled to ensure uniform quality with minimum field assembly. Each unit has been designed with rigging and assembly in mind and includes features to minimize the number of tools required and installation time.

► STANDARD RIGGING GUIDES

Rigging guides allow for the upper and lower section of the units to perfectly align and engage. The self-guiding pins ensure proper placement of the upper section and lower section, making rigging much simpler, reducing installation time.

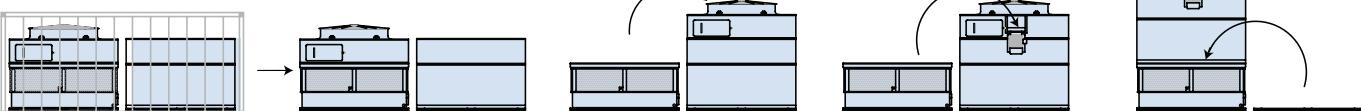

Rigging Guides

► KNOCKDOWN UNITS (OPTION)

Knockdown units are available for jobs where access to the tower location is limited by elevators, doorways, or similar obstacles, where lifting methods impose very strict weight limits, or where the shipping cost of a fully assembled unit is excessive. All materials of construction and design features are the same as those of a factory assembled unit. Welded stainless steel cold water basins and TriArmor® Corrosion Protection System basins are excluded due to the need for in-plant assembly.

PFi Containerized Unit

Easily Assembled Containerized Units

➤ Sound Options

Recognition of the importance of sound restriction is growing and can be a very important design criterion for any project. BAC maintains the widest selection of sound mitigating options in the market place and can provide the most cost effective option to meet any requirement.

▶ STANDARD FAN

The fan provided for all PFi Closed Circuit Cooling Towers is selected to optimize low sound levels and maximize thermal performance. Thermal performance with the Standard Fan has been certified in accordance with CTI Standard STD-201.

Low Sound Fan

▶ LOW SOUND FAN (OPTION)

The Low Sound Fan option reduces sound up to 8 dBA. Adding a high solidity fan allows for decreased fan speed, which proportionally decreases sound levels. Thermal performance with the Low Sound Fan has been certified in accordance with CTI Standard STD-201.

▶ WHISPER QUIET FAN (OPTION)

The Whisper Quiet Fan reduces sound up to 15 dBA. This single piece, high solidity fan is made from chemical resistant fiber reinforced polyester (FRP) and comes standard with blade leading protection. As a single piece fan, the non-corrosive blades are permanently pitched and require minimal maintenance. Thermal performance with the Whisper Quiet Fan has been certified in accordance with CTI Standard STD-201.

Water Silencers

▶ WATER SILENCERS (OPTION)

Water silencers are available to reduce the sound of falling water inherent in induced draft counterflow evaporative condensers. When utilized with one of BAC's Low Sound Fans, the sound contribution due to water noise can be reduced to negligible levels. Thermal performance with the water silencers has been certified in accordance with CTI Standard STD-201.

▶ DISCHARGE SOUND ATTENUATION (OPTION)

Factory designed, tested, and rated sound attenuation options are available on the air discharge for models PFi-0406 and PFi-0412. Thermal performance with the discharge attenuation has been certified in accordance with CTI Standard STD-201.

PFi Custom Features & Options

› Air Intake

In a closed circuit cooling tower, airborne debris can be entrained in the water through the unit's air intake. Reducing the amount of debris that enters the tower lowers maintenance requirements and helps to maintain thermal efficiency.

► COMBINED INLET SHIELDS

The combined inlet shields' (CIS) bent flow path blocks sunlight from the cold water basin and acts as a screen to prevent debris from entering the unit. These benefits result in a significant reduction in algae growth, debris accumulation, and scale build-up. CIS are constructed from corrosion and UV resistant PVC and are installed in easy to handle sections to facilitate removal, inspection, and replacement. The use of CIS results in lower maintenance costs and ease of maintenance over the life of the unit.

Combined Inlet Shields

› Air Discharge Options

BAC offers a full line of air discharge options that are built, tested, and rated specifically for all PFi Closed Circuit Cooling Towers. During idle periods, discharge hoods with PCDs and insulation are designed to minimize heat loss. When it is not possible to position cooling towers at the proper height above all other structures, fan cowl extensions can be provided to achieve the correct elevation for the fan discharge.

PCD HOODS AND INSULATION (OPTION)

The innovative design of BAC closed circuit cooling towers results in a low heat loss when the unit is idle. When additional heat loss prevention is desired, factory mounted PCDs with stainless steel linkages and damper actuators can be provided. The motor actuators are easily accessible. The addition of factory mounted insulation to the hood and/or coil casing further reduces the heat loss by minimizing losses due to conduction. Per ASHRAE 90.1-2010 either an automatic 3 way valve or PCDs are required on closed circuit cooling towers used on heat pump applications in climate zones 3 through 8.

PFi with a PCD Hood

► FAN COWL EXTENSIONS (OPTION)

Fan cowl extensions allow for unobstructed airflow on the discharge side, which help ensure that the units are providing maximum capacity. When closed circuit cooling towers cannot be located above adjacent structures, fan cowl extensions will be necessary so that discharge air flows out of the tower properly and is not circulated back toward the air intake by the combination of wind pressure and adjacent structures.

NOTE: Modular platforms, ladders, handrails, safety gates, and safety cages can be added at the time of order or as an aftermarket item.

➤ Access Options

BAC provides a broad offering of access options. Our evaporative equipment is designed to be easily maintained for sustaining capacity over a longer life. All BAC platforms and ladders are OSHA compliant to ensure personnel safety and code compliance.

MOTOR REMOVAL SYSTEM (OPTION)

All motor removal system options include davit arm(s) to facilitate motor replacement.

MODULAR EXTERNAL PLATFORMS AND LADDER PACKAGES (OPTION)

Every modular external platform is pre-assembled and pre-fitted at the factory to ensure that every component will fit and function exactly as described. The platform is rigged easily in the field with minimum fasteners and drastically reduces the time required for rigging external access platforms.

► EXTERNAL LADDER (OPTION)

The PFI can be furnished with an inclined ladder - a 75° angled ladder - extending from the base of the unit to the access door, providing safe access with minimal space requirements. All components are designed to meet OSHA requirement.

Motor Removal Davit Arm

Modular External Platform with Ladder and Safety Cage

NOTES:

- 1. Nominal tons of cooling represents 3 USGPM of water cooled from 95°F to 85°F at a 78°F entering wet-bulb temperature.
- 2. CFM listed is for the highest fan motor HP and vary with the fan HP.
- 3. Operating weight is for the unit with the water level in the cold water basin at the overflow.
- 4. The actual size of the coil inlet and outlet connection may vary with the design flow rate. Consult unit print for dimensions.
- 5. Coil inlet and outlet connections are beveled for welding.
- 6. Models with Whisper Quiet Fans may have heights up to 5 1/2" greater than shown.
- 7. Standard make-up, drain and overflow connections are located near the bottom of the unit. Make-up connection is 1 1/2" MPT standpipe, drain is 2" FPT, and overflow is 3" FPT. Standard make-up, drain, and overflow connections are MPT.

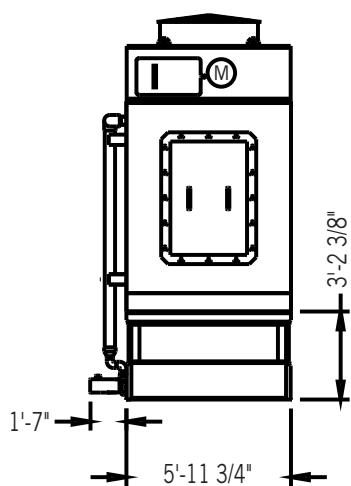

Do not use for construction. Refer to factory certified dimensions. This catalog includes data current at the time of publication, which should be reconfirmed at the time of purchase.

NOTES:

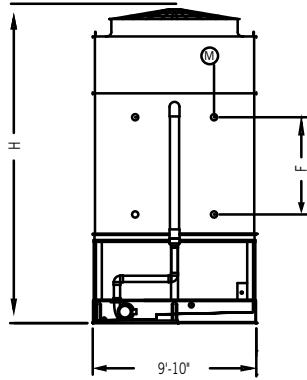

- Nominal tons of cooling represents 3 USGPM of water cooled from 95°F to 85°F at a 78°F entering wet-bulb temperature.
- CFM listed is for the highest fan motor HP and vary with the fan HP.
- Operating weight is for the unit with the water level in the cold water basin at the overflow.
- The actual size of the coil inlet and outlet connection may vary with the design flow rate. Consult unit print for dimensions.
- Coil inlet and outlet connections are beveled for welding.
- Models with Whisper Quiet Fans may have heights up to 5 1/2" greater than shown.
- Standard make-up, drain and overflow connections are located near the bottom of the unit. Make-up connection is 1 1/2" MPT standpipe, drain is 2" FPT, and overflow is 3" FPT. Standard make-up, drain, and overflow connections are MPT.

Do not use for construction. Refer to factory certified dimensions. This catalog includes data current at the time of publication, which should be reconfirmed at the time of purchase.

NOTES:

1. Nominal tons of cooling represents 3 USGPM of water cooled from 95°F to 85°F at a 78°F entering wet-bulb temperature.
2. CFM listed is for the highest fan motor HP and vary with the fan HP.
3. Operating weight is for the unit with the water level in the cold water basin at the overflow.
4. The actual size of the coil inlet and outlet connection may vary with the design flow rate. Consult unit print for dimensions.
5. Coil inlet and outlet connections are beveled for welding.
6. Models with Whisper Quiet Fans may have heights up to 5 1/2" greater than shown.
7. Standard make-up, drain and overflow connections are located near the bottom of the unit. Make-up connection is 1 1/2" MPT standpipe, drain is 2" FPT, and overflow is 3" FPT. Standard make-up, drain, and overflow connections are MPT.

Do not use for construction. Refer to factory certified dimensions. This catalog includes data current at the time of publication, which should be reconfirmed at the time of purchase.

NOTES:

- 1. Nominal tons of cooling represents 3 USGPM of water cooled from 95°F to 85°F at a 78°F entering wet-bulb temperature.
- 2. CFM listed is for the highest fan motor HP and vary with the fan HP.
- 3. Operating weight is for the unit with the water level in the cold water basin at the overflow.
- 4. The actual size of the coil inlet and outlet connection may vary with the design flow rate. Consult unit print for dimensions.
- 5. Coil inlet and outlet connections are beveled for welding.
- 6. Models with Whisper Quiet Fans may have heights up to 5 1/2" greater than shown.
- 7. Standard make-up, drain and overflow connections are located near the bottom of the unit. Make-up connection is 1 1/2" MPT standpipe, drain is 2" FPT, and overflow is 3" FPT. Standard make-up, drain, and overflow connections are MPT.

Do not use for construction. Refer to factory certified dimensions. This catalog includes data current at the time of publication, which should be reconfirmed at the time of purchase.

NOTES:

- Heat Loss based on 50°F (10°C) entering coil water and -10°F (-23.3°C) ambient with 45 MPH wind (fans and pumps off).
- One inch thick PVC nitrate rubber blend thermal insulation on both the PCD hood and the casing panels surrounding the coil.

NOTE:

1. Hood shipping weight includes shipping skid weight.
2. Hood dimensions are for units with a standard fan. For alternate fans, please consult your local BAC Representative.

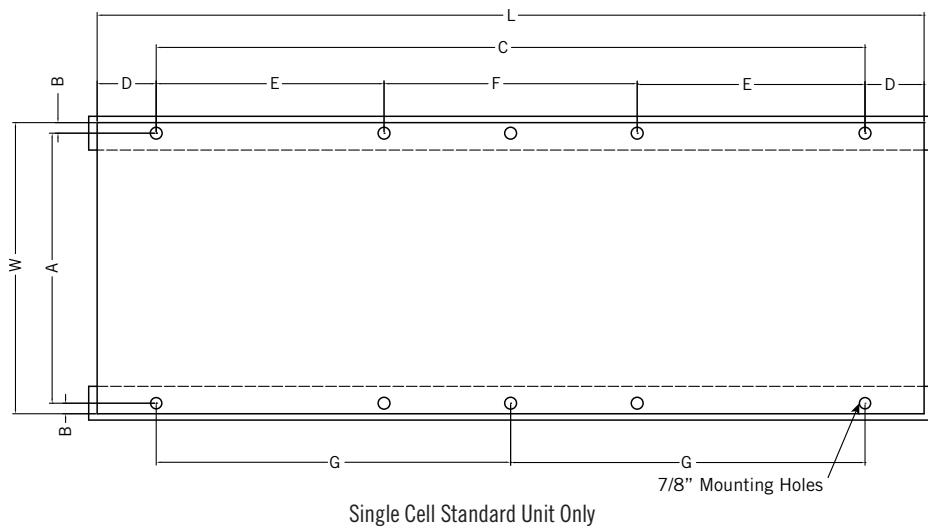

PFI Structural Support

The recommended support arrangement for the PFI Closed Circuit Cooling Tower consists of parallel structural members positioned as shown on the drawing below. In addition to providing adequate support, the members also serve to raise the unit above any solid foundation to ensure access to the bottom of the unit. The PFI Closed Circuit Cooling Tower may also be supported on columns at the anchor bolt locations shown.

To support a PFI Closed Circuit Cooling Tower on columns with an alternate steel support arrangement, or the optional structurally upgraded unit, consult your local BAC Representative.

NOTES:

1. Contact your local BAC Representative for multi-cell or structurally upgraded unit support.
2. Support members and anchor bolts shall be designed, furnished, and installed by others.
3. Design of support members and anchor bolts shall be in accordance with the strength and serviceability requirements of the applicable building code and project specifications.
4. Support members shall be level at the top.
5. Refer to the certified unit support drawing for loading and additional support requirements.
6. If vibration isolation (provided by others) is used, the isolators should be located under a structural base that complies with one of the recommended support arrangements. Contact your local BAC Representative for all other isolator configurations.

Alternative Structural Support

For replacement installations, the PFI Closed Circuit Cooling Tower has been designed to match the supports of many existing evaporative condensers without modifications. Shown below is the most common support arrangement which can be accommodated by the PFI. If individual point support is required, or if the existing support arrangement is not shown as below, consult your local BAC Representative for assistance.

NOTES:

1. Contact your local BAC Representative for multi-cell or structurally upgraded unit support.
2. Support members and anchor bolts shall be designed, furnished, and installed by others.
3. Design of support members and anchor bolts shall be in accordance with the strength and serviceability requirements of the applicable building code and project specifications.
4. Support members shall be level at the top.
5. Refer to the certified unit support drawing for loading and additional support requirements.
6. If vibration isolation (provided by others) is used, the isolators should be located under a structural base that complies with one of the recommended support arrangements. Contact your local BAC Representative for all other isolator configurations.

RELAX, It's CTI Certified.

BAC was the first manufacturer to get certified by the Cooling Technology Institute (CTI) so you can rest assured that the certified FXV and NEW PFi Closed Circuit Cooling Tower product lines will perform at the published capacities.

DID YOU KNOW?

- CTI is a nonprofit self-governing association dedicated to the improvement in technology, design, and performance of cooling towers.
- In 1998, CTI Standard STD-201 was expanded to include closed circuit cooling towers.
- BAC was the first manufacturer to certify a line of closed circuit cooling towers.
- Certified units are randomly selected each year by CTI and tested to demonstrate continued compliance.
- A deficiency in cooling tower performance is hard to detect, therefore by having a CTI certified unit you can have peace of mind that your unit will perform in accordance with the published ratings.

BENEFITS OF CTI CERTIFIED UNITS from Baltimore Aircoil Company

1. Confidence that your closed circuit cooling tower will perform at the published capacities.
2. Demonstrated code compliance and risk reduction due to independent validation and verification.
3. Certified thermal performance eliminates the potential of excessive operating costs due to deficient equipment.
4. Design flexibility with certification for both water and glycol.
5. Eliminates costs associated with expensive and time consuming field thermal performance testing.

OUT WITH THE OLD, IN WITH THE NEW!

Look for the CTI Certified logo! Is your unit up for replacement? If so, make sure that you replace your unit with a certified unit from Baltimore Aircoil Company!
